Art Unit: 2143

DETAILED ACTION

1. Claims 1-22 are presented for examination; claims 1, 11, 18, and 21 independent.

Claim Rejections - 35 USC § 112

2. Applicant's arguments with respect to the rejections under 35 USC 112, first paragraph are persuasive. The rejection is withdrawn.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-3, 5, 8, 9, 11-13, 15, and 17-22 are rejected under 35 USC 103(a) as being unpatentable over Escobosa et al. (US 2003/0151538) (hereinafter Escobosa) in view of Hayes et al. (US 2002/0140571) (hereinafter Hayes).

4. Referring to claim 1, Escobosa discloses a method for command brokering on behalf of an intelligent device (i.e. home theater equipment) (e.g. abstract) which discloses:

defining in a client device a desired function to be performed by the intelligent device (i.e. various operations), the desired function being only a portion of all functions that the intelligent device is capable of performing (i.e. the system only downloads IR

Art Unit: 2143

sequences to perform various operations such as channel tuning to a particular TV station, setting up various equipment, etc.) (¶ 65);

identifying the intelligent device and the desired function to a web site (i.e. supplier site 30) having control instructions for the intelligent device by the client device through a network (Figure 4a; ¶ 66);

returning to the client device from the web site, a subset of the control instructions (i.e. sequences) for controlling the intelligent device to perform the desired function (i.e. user access the web site to download sequences of pre-programmed instructions to perform various operations) (¶ 65-66); and

forwarding only a subset of the control instructions from the remote control to the intelligent device to effect the desired function (i.e. when the user purchases a pay-per-view movie, the icon and code for unlocking the movie are downloaded to the remote controller, no other codes are downloaded to the remote) (¶ 65-67);

wherein the client device does not have a compete set of the control instructions for the intelligent device (i.e. only those functions the user "drags-and-drops" onto the layout of the remote control will be used on the remote) (¶ 45, 65, and 67).

Escobosa does not disclose that the defining is done using the wireless internet access device (i.e. the remote control), rather the remote is defined using a program running on the PC and then the layout is downloaded to the remote. In analogous art, Hayes discloses another method for programming a remote control with particular functions which discloses defining on the remote control itself the layout for the remote control (i.e. via setup application 501 and personalization sub-menu 503 configures the

Art Unit: 2143

remote to the user's liking) (Figure 5; ¶ 123-130). It would have been obvious to one of ordinary skill in the art to combine the teaching of Escobosa with Hayes since Hayes teaches a modifying a similar remote control to that of Escobosa using only the remote control, therefore providing motivation to one of ordinary skill in the art to provide the application used in Escobosa on the remote control in order to realize the benefits used in Hayes, specifically to not require the use of a PC to reprogram a remote control, thereby making it easier for a user to reprogram the remote control.

Page 4

- 5. Referring to claim 2, Hayes discloses the forwarding step comprises forwarding through an infrared communication device (¶ 45).
- 6. Referring to claim 3, Escobosa discloses forwarding through an RF interface (¶ 45).
- 7. Referring to claim 5, Escobosa discloses the defining step comprises defining through a user keypad entry (i.e. touchpad) (col. 23, line 59 to col. 24, line 31).
- 8. Referring to claim 8, Escobosa discloses arranging for the web site to have access to the control instructions by pre-programming the control instructions into a memory of the web site (i.e. server with database 12) (Figure 1).

Art Unit: 2143

- 9. Referring to claim 9, Escobosa discloses accessing a server 30 having the control instructions 14 for controlling the intelligent device (Figure 1; ¶ 47).
- 10. Claims 11-13, 15, and 17-22 are rejected for similar reasons as stated above. Furthermore Escobosa discloses that the device explicitly identifies the function to the web site to perform a set of functions (¶ 65-67).

Claims 4, 6, 7, 14, 16, are rejected under 35 U.S.C. 103(a) as being unpatentable over Escobosa-Hayes in view of Maymudes (USPN 6,748,278).

11. Referring to claim 4, Escobosa-Hayes discloses the invention substantively as described in claim 1. Escobosa-Hayes does not disclose forwarding through ultrasonic communication device. In analogous art, Maymudes discloses another method of brokering on behalf of an intelligent device wherein the forwarding can occur through an ultrasonic communication device (i.e. Bluetooth) (col. 3, lines 20-32). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Maymudes with Escobosa-Hayes since Escobosa discloses the invention can be used with a plurality of different devices (Figure 4a). This would lead one of ordinary skill in the art to determine which other devices can be used for brokering command, eventually finding Maymudes finding a command broker for televisions, stereos, VCR's speakers, microwave ovens, etc (col. 7, lines 40-50).

Art Unit: 2143

- 15,724 Page 6
- 12. Referring to claim 6 and 7, Escobosa-Hayes discloses the invention substantively as described in claim 1. Escobosa-Hayes does not disclose defining said desired function is made by a measurement by the WIAD. In analogous art, Maymudes discloses another method of brokering on behalf of an intelligent device wherein defining said desired function is made by a measurement by the WIAD (I.e. computer facilitator 202) (col. 5, lines 35-43). Furthermore, since the WIAD is connected to the wireless network, and also the remote controller 204 and controlled device 206 are as well, it is considered that the measurement is done by the wireless communication network as well.). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Maymudes with Escobosa-Hayes since Escobosa discloses the invention can be used with a plurality of different devices (Figure 4a). This would lead one of ordinary skill in the art to determine which other devices can be used for brokering command, eventually finding Maymudes finding a command broker for televisions, stereos, VCR's speakers, microwave ovens, etc (col. 7, lines 40-50).
- 13. Claims 14, and 16 are rejected for similar reasons as stated above.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Escobosa-Hayes in view of Baun et al. (US 2003/0197930) (hereinafter Baun).

Art Unit: 2143

14. Escobosa-Hayes discloses the invention substantively as described in claim 1. Escobosa-Hayes does not disclose the intelligent device is a telescope and the defining step comprises determining coordinates based on a position. In analogous art, Baun discloses another method for brokering control which discloses intelligent device is a telescope (e.g. abstract) and the defining step comprises determining coordinates based on a position (p. 8, ¶ 87). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Baun with Escobosa-Hayes since Escobosa discloses the invention can be used with a plurality of different devices (¶47). This would lead one of ordinary skill in the art to determine which other intelligent devices can be used for brokering command, eventually finding Baun finding a command broker for GPS systems for telescopes (col. 7, lines 40-50).

Response to Arguments

15. Applicant's arguments filed December 27, 2007 have been fully considered but are most in view of the new rejections presented above.

Conclusion

16. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2143
